The present sequence is mouse Stat3 protein fragment containing 1-154 amino acids of Stat3 protein. This Stat3 fragment showed very weak binding to c-Jun protein in the cell extract. The invention relates to methods for identifying interacting regions of transcription factors and methods for identifying agents which modulates the interaction between a transcription factor such as c-Jun and a Stat protein such as Stat-1 and Stat-3, useful for modulating gene transcription e.g., cellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mouse; Stat3 protein; transcription factor; c-Jun; gene transcription; cellular transformation; dysproliferative disease; cancer; psoriasis;

A highly homologous gene (given in AAQ89338) was isolated that encoded a 91 kDa protein (AAR72080) (Stat1) that was responsive to interferon-gamma. Using a fragment of the mouse gene as probe, 2 additional members of the 113-91 family of receptor recognition factor proteins were isolated. The 2 genes (AAQ89339 -40) were cloned in plasmids 13sfl and 19sf6 and encoded proteins termed Stat4 (AAR72081) and Stat3 (AAR72082), respectively. (Updated on 25-MAR-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mouse signal transducer and activator of transcription (STAT) protein STAT4 (AAW03176) serves a dual purpose, i.e. signal transduction from ligand-activated receptor kinase complexes followed by nuclear translocation and DNA binding to activate transcription. Recombinant STAT4 can be obtd. using cDNA clone 19sf6 (AAT31278) obtd. from splenic/thymic cells. STAT4 includes a DNA-binding domain (see also DNA binding in a receptor recognition and message delivery vi DNA binding domains (see also AAW03167) are useful for screening antagonists used to inhibit STAT-mediated signal transduction and

The present invention relates to a crystal of an N-terminal fragment of a signal transducer and activator of transcription (STAT) protein. The crystal effectively diffracts X-rays, allowing the determination of the atomic coordinates of the N-terminal domain to a resolution of grater than 5.0 Angstroms. The present sequence is the N-terminal domain of the murine STAT 3 protein. The N-terminal domain enables STAT dimers to interact and bind DNA cooperatively, a mechanism important for gene activation. The crystals are useful in drug screening and development by selecting a potential drug by performing rational drug design with the 3-dimensional structure determined for the crystal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPMEIARIVARCLWEESRLLQTAA 120

         signal transducer and activator of transcription (STAT) proteins for the discovery and development of new drug compounds based on the structural compound that binds to the N-terminal domain of a STAT protein.

Compound that binds to the N-terminal domain of a STAT protein, identifying a compound that enhances or diminishes the binding of the dimeric STAT proteins to each other and/or their nucleic acid binding site; or identifying a compound that enhances or diminishes the ability of STAT protein dimers to induce the expression of a gene operably under the control of a promoter containing at least two adjacent weak binding sites of a promoter of a gene containing at least two adjacent weak binding sites of a for STAT protein dimers. The methods are used for identifying new drugs. An antagonist of STAT N-terminal dimeric interactions that inhibits the binding of the STAT dimers to adjacent weak binding sites on diseases, e.g. inflammation, allery, asthma and lenkaemias. On the other hand, an agonist of N-terminal dimeric interactions between STAT dimers, can be used as drugs in the treatment of diseases e.g. anneamia, neutropaenia, thrombocytopaenia, cancer, obesity, viral diseases and growth retardation. The present sequence is murine STAT3 protein
                                                                                                                                                                                                                                                                                                                                                                                                                        LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPWEIARIVARCLWEESRLLQTAA 120

```
transducer and activator of transcription (STAT) protein, where the crystal effectively diffracts X-rays for the determination of the atomic coordinates of the N-terminal domain of the STAT protein to a resolution of greater than 5.0 Angstrom. The methods and compositions are useful for the design and screening of drugs that enhance or inhibit STAT-STAT dimeninteractions. The present sequence represents the amino acid sequence of mouse STAT3 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPMEIARIVARCLWEESRLLQTAA 120

The invention relates to a method of modulating angiogenesis and immune response. Method involves administering to an individual a compound that modulate the activity of signal transducer and activator of transcription 3 (Stat3). Modulating angiogenesis is useful for treating or preventing, bypoxic or ischaemic condition or disorder which is the result of stroke, ischaemia in the lower extremities, infarction, inflammation, tissue ischaemia in the lower extremities, infarction, inflammation, tissue ischaemia in the lower extremities, infarction, suffocation, shock, chronic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, chonic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, adult respiratory distress syndrome, cardiac arrest, nitrogen necrosis, proliferative angiopathy e.g. diabetic microangiopathy with neovascularisation. Suppressing an immune response is useful for ameliorating a syndrom of an autoimmune disease such as systemic lupus erythematosus, multiple sclerosis, insulin dependent diabetes mellitus, signature syndrome, scleroderma, polymyostitis, chronic active hepatitis, mixed connective tissue disease, primary biliary cirthosis, permitious anaemia, autoimmune thyroiditis, idiopathic Addison's disease, victuling, gluten-sensitive enteropathy, autoimmune butropenia myasthenia gravis, idiopathic thrombocytopenia purpura, Grave's disease, victuling, autoimmune cinfertility, bullous pemphigoid, discoid lupus, ulcerative colitis and dense deposit disease. The method is useful in preventing or treating appearing a specific proliferative and oncedenic disease which includes sarcomas and conversioners. carcinomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, fibrosarcoma, liposarcoma, degenerative disorders, growth deficiency, hypoproliferative disorders, physical trauma, lesions and wounds. The method is also used in gene therapy. The present sequence is human Stat3beta protein

Claim 2; Page 1084-1087; 2690pp; English.

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (1). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB57020 to ABB5734) or by determining the protein sequences in ABB57020 to ABB5734) or by determining the levels or expression profile of a gene group comprising these genes. The expression indicator when screening for ischaemic condition-improving drugs or primars for a mouse ischaemic diseases. AB199913 and AB199914 represent PCR primars for a mouse ischaemic tondition related sequence, which are used in the exemplification of the present invention

The invention relates to a method of modulating angiogenesis and immune response. Method involves administering to an individual a compound that modulate the activity of signal transducer and activator of transcription 3 (Stati). Modulating angiogenesis is useful for treating or preventing thypoxic or ischaemic condition or disorder which is the result of stroke, ischaemia, coronary atherosclerosis, myocardial infarction, inflammation, crisum ischaemia in the lower extremities, infarction, trauma, vascular occlusion, prenatal or postnatal oxygen deprivation, suffocation, shock, chronic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, chronic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, chronic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, chitrogen necrosis, proliferative angiopathy e.g. diabetic microangiopathy with neovascularisation. Suppressing an immune response is useful for amplicating a symptom of an autoimmune disease such as systemic lupus extrementosus, multiple sclerosis, insulin dependent diabetes mellitus, siggren's syndrome, scleroderma, polymyositis, chronic active hepatitis, mixed connective tissue disease, primary biliary cirrhosis, pernicious anaemia, autoimmune thyroiditis, idiopathic Addison's disease, vitiligo,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPMEIARIVARCLWEESRLLQTAA 120
                    idiopathic thrombocytopenia purpura, Grave's disease, Goodpasture's disease, rheumatoid arthritis, cirrhosis, pemphigus vulgaris, autoimmune infertility, bullous pemphigoid, discoad lupus, ulcerative colitis and dense deposit disease. The method is useful in preventing or treating specific proliferative and oncogenic disease which includes sarcomas and earthomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, fibrosarcoma, liposarcoma, degenerative disorders, growth deficiency, hypoproliferative disorders, physical trauma, lesions and wounds. The method is also used in gene therapy. The present sequence is human Stat3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

The invention relates to a method of modulating angiogenesis and immune response. Method involves administering to an individual a compound that modulate the activity of signal transfucer and activator of transcription 3 (Stata). Modulating angiogenesis is useful for treating or preventing hypoxic or ischaemic condition or disorder which is the result of stroke, ischaemia, coronary atherosclerosis, myocardial infarction, inflammation, tissue ischaemia in the lower extremities, infarction, inflammation, tissue ischaemia in the lower extremities, infarction, rauma, vascular occlusion, prenatal or postnatal oxygen deprivation, suffocation, shock, ofronic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, epilepsy, emphysema, adult respiratory distress syndrome, cardiac arrest, introgen necroasis, proliferative angiopathy e.g. diabetic microangiopathy epilepsy, emphysema, adult respiratory distress syndrome, cardiac arrest, or introgen necroasis, proliferative aniongpathy e.g. diabetic microangiopathy with neovascularisation. Suppressing an immune response is useful for ameliorating a symptom of an autoimmune disease such as systemic lupus crythematosus, multiple sclerosis, insulin dependent diabetes mellitus, signate on autoimmune thyroiditis, idiopathic Addison's disease, vitiligo, anaemia, autoimmune thyroiditis, idiopathic Addison's disease, vitiligo, allower enteropathy, autoimmune neutropenia, mysethenia gravis, idiopathic thromboxycopenia purpura, Grave's disease, coodpestures and carcinomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, chence deposit disease. The method is useful in preventing or treating specific proliferative and oncogenic disease which includes sarcomas and carcinomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, thypoproliferative disorders, physical trauma, lesions and wounds. The method is also used in gene therapy. The present sequence is human construction related to angiogenesis regulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPMEIARIVARCLWEESRLLQTAA 120
compound that modulates the activity of a signal transducer and activator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mouse; acute phase response factor; transcription factor; interleukin-6;

                                                                                                                                                                New acute phase response factor - for developing inhibitory agents for treating diseases induced by cytokine(s) such as IL-6, e.g. inflammatory
                                                                                                                                                                                                                                                         The sequence represents a mouse acute phase response factor (APRF), a transcription factor related to signal transmission of interleukin-6 (I 6). The protein is encoded by a CDNA, isolated from a mouse liver CDNA library using a polymerase chain reaction product (amplified using primers derived from an IL-6-treated mouse liver peptide) as a probe. APRF-inhibitors, e.g. antibodies, antisense oligonucleotides or ribozymes, may be used to treat diseases induced by IL-6, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MAQWNQLQQLDTRYLKQLHQLYSDTFPMELRQFLAPWIESQDWAYAASKESHATLVFHNL

The present sequence represents a predominant allelic variant of human Signal Transducer and Activator of Transcription 3 (STAT3) protein, an intracellular transcription factor which mediates IL-6 signals. The encoding sequence differs from the original published human STAT3 gene sequence (Akira et al., 1994). Host cells comprising a recombinant STAT3 protein is useful as a medicament or pharmaceutical composition for treatment of autoimmune or inflammatory diseases
                                                                                                                                                                                                                                                                                                                                                                  LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPMEIARIVARCLWEESRLLQTAA 120

                                                                                                                                                                       The sequence corresponds to a human acute phase response factor (APRF), a transcription factor related to signal transmission of interleukin-6 (IL-6). The protein is expressed from a human placenta cDNA, isolated using an IL-6-treated mouse liver cDNA probe. APRF-inhibitors, e.g. antibodies, antisense oligonucleotides or ribozymes, may be used to treat diseases induced by IL-6, e.g. inflammatory disease, leukemia, cancer,

transcription 3 (STAT-3). The invention provides a crystal of a core portion of a STAT protein in dimer form with an 18-mer duplex DNA (see AAA89233) that contains a binding site for the STAT dimer. The core portion comprises a coiled-coil domain comprising 4 long helices, a DNA binding domain which contains an immunoglobulin-like fold, a C-terminal STAT protein an immunoglobulin-like fold, a C-terminal crystal is of sufficient quality to perform X-ray crystallography studies. Methods of preparing the crystals are included in the invention. Knowledge of the STAT protein's 3-dimensional structure will aid in structure-based drug design. The crystal can be used in drug screening assays to identify agonist and antagonist compounds. Antagonists can be used to treat inflammation, allergy, asthma and leukaemia, and agonists to treat anaemia, neutropenia, thrombocytopenia, cancer, obesity, viral diseases, growth retardation, and other conditions characterized by insufficient STAT activity
                                                                                                                                              present sequence is that of human signal transducer and activator of
Novel crystal useful in drug screening assays, comprises portion of signal transducer, activator of transcription and duplex DNA.

```
The invention relates to a complex of protein-protein interactions

(forming a protein-protein interaction map, PIM) in adipocyte cells as

defined in the specification, or polynucleotides in adipocyte sencoding

for the polypeptides. Also included are a recombinant cell expressing the

interacting polypeptides and a method of selecting a modulating compound

in adipocyte cells, by cultivating a recombinant host cell on a selective

medium containing a modulating compound and a reporter gene the

expression of which is toxic for the recombinant host cell which is

transformed with two vectors, where the first vector comprises a

coplynucleotide encoding a first hybrid polypeptide and DNA binding domain

and the second vector comprising a polynucleotide encoding a second

hybrid polypeptide and an activating domain that activates the toxic

creporter gene, when the first and second hybrid polypeptides interact and

selecting the modulating compound which inhibits the growth of the

creombinant host cell (i.e. using the yeast two-hybrid system). The

complexes are useful for identifying compounds that modulate the protein-

compound isolated by the method is useful for treating and preventing

compound isolated by the method is useful for treating and preventing

compound isolated by the method is useful for treating and preventing

cobsenty or metabolic diseases. The interactions between the proteins of

the complex further define a set of selected interacting admains, SID.

The present sequence represents a member of the protein complex of the

invention, used as the bait protein in the yeast two-hybrid assay
Novel complex of protein-protein interactions in adipocyte cells for identifying compounds that modulate the protein-protein interactions and useful for treating obesity and metabolic disorders.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. Biol. Chem. 277:8004-8011(2002)
-!- FUNCTION: Transcription factor that binds to the interleukin-6
-(IL-6)-responsive elements identified in the promoters of various acute-phase protein genes.
-!- PATHWAY: Involved in the gp130-mediated signaling pathway.
-!- SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STATI). Interacts with NCOAI.
-!- SUBCELLULAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation.
                                                                                                                                                                                                                                                                                                                                MEDLINE=95215843; PubMed=7701321;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ISOJG-P40761-2; Sequence-VSP 010474;
ISOJG-P40765-2; Sequence-VSP 010474;
TISSUE SPECIFICITY: Heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas.

PTM: Tyrosine phosphorylated in response to IL-6, IL-11, CNTF, ILF, CSF-1, EGF, PDGF, IFN-alpha and OSM. Serine phosphorylation is important for the formation of stable DNA-binding STAT3 homodimers and maximal transcriptional activity.

SIMILARITY: Belongs to the transcription factor STAT family.

SIMILARITY: Contains 1 SH2 domain.
                                                                                                                                                                                                                                              0

                                                                                                                                                                                                                                            -i-FUNCTION: Transcription factor that binds to the interleukin-6
-i-FUNCTION: Transcription factor that binds to the interleukin-6
-i-FUNCTION: Transcription genes STAT3B interacts with the N-terminal acute-phase protein genes STAT3B interacts with the N-terminal part of JUN to activate such promoters in a cooperative way.
-i-PATHWAY: Involved in the gp130-mediated signaling pathway.
-i-SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STAT1). Interacts with NCOA1 (By similarity).
-i-SUBCELLULAR LOCATION: Cytoplasmic; translocated into the nucleus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Name-Del-701;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
acute-phase protein genes.
-!- PATHWAY: Involved in the gp130-mediated signaling pathway.
-!- SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STATI). Interacts with NCOAI (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation (By similarity).
-!- PTM: Tyrosine phosphorylation (By similarity).
-!- PTM: Tyrosine phosphorylation of Similarity.
-!- FTM: Tyrosine phosphorylation of stable DNA-binding STAT3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pfam; PF00017; SH2; 1.
